AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the

application:

LISTING OF CLAIMS:

(currently amended): An image display device, comprising: 1.

a display panel which has a plurality of pixel sections each of which includes at least a

pixel displaying an image for the first viewpoint and a pixel displaying an image for the second

viewpoint, said pixel sections being provided periodically in one direction,; and said display

panel comprising an image surface on which the plurality of pixels are displayed

an optical unit refracts the light emitted from said pixels and emits the light in directions

different from each other, and

an adhesive layer which is provided on a part of an area enclosing an image display area

of said display panel to fix the optical unit and the display panel in line,

wherein the adhesive laverlayer is provided to installaffixes the optical unit directly on

the image surface of on the display panel such that a positional relationship between the optical

unit and the display panel is maintained while permitting a difference in expansion or contraction

between the optical unit and the display panel so as to permit displacement of the optical unit due

to expansion and contraction of a material of the optical unit.

AMENDMENT UNDER 37 C.F.R. § 1.114(c) Attorney Docket No.: Q80096

U.S. Appln. No.: 10/787,172

2. (previously presented): The image display device according to claim 1, wherein said optical unit is a lenticular lens having a plurality of semicylindrical lenses, longitudinal direction of which is perpendicular to said one direction, or a fly-eye lens having a plurality of convex lenses in which a lens pitch in said one direction and the lens pitch in a direction perpendicular to said one direction are different from each other, and said adhesive layer is provided along a side of a frame extending in a longitudinal direction of said convex lens or the longitudinal direction of said semicylindrical lens in said optical unit.

- 3. (previously presented): The image display device according to claim 1, wherein said optical unit is a lenticular lens having a plurality of semicylindrical lenses, longitudinal direction of which is perpendicular to said one direction, or a fly-eye lens having a plurality of convex lenses in which a lens pitch in said one direction and the lens pitch in a direction perpendicular to said one direction are different from each other, and said adhesive layer is provided along the side of a frame extending in a direction orthogonal to a longitudinal direction of said convex lens or the longitudinal direction of said semicylindrical lens in said optical unit.
- 4. (previously presented): image display device according to claim 1, wherein said optical unit is a fly-eye lens having a plurality of convex lenses in which a lens pitch in said one direction and the lens pitch in a direction perpendicular to said one direction are equal to each other, and said adhesive layer is provided along a short side of said optical unit.

AMENDMENT UNDER 37 C.F.R. § 1.114(c)

U.S. Appln. No.: 10/787,172

5. (previously presented): The image display device according to claim 1, wherein said

optical unit is a fly-eye lens having a plurality of convex lenses in which a lens pitch in said one

Attorney Docket No.: Q80096

direction and the lens pitch in a direction perpendicular to said one direction are equal to each

other, and said adhesive layer is provided along a side orthogonal to a short side of said optical

unit.

Claims 6-14 (canceled).

15. (previously presented): The image display device according to claim 2, wherein said

adhesive layer is provided along the side extending in a direction orthogonal to the longitudinal

direction of said convex lens or the longitudinal direction of said semicylindrical lens in said

optical unit.

16. (previously presented): The image display device according to claim 4, wherein said

adhesive layer is provided along a side orthogonal to the short side of said optical unit.

Claims 17-44 (canceled).

AMENDMENT UNDER 37 C.F.R. § 1.114(c)

U.S. Appln. No.: 10/787,172

45. (previously presented): The image display device according to claim 1, wherein the

Attorney Docket No.: Q80096

adhesive layer is provided along two sides of the optical unit.

Claims 46-47 (canceled).

48. (currently amended): An image display device comprising:

a display panel which has a plurality of pixel sections each of which includes at least a

pixel displaying an image for a first viewpoint and a pixel displaying an image for a second

viewpoint, said pixel sections being provided periodically in one direction, and said display

panel comprising an image surface on which the plurality of pixels are displayed;

an optical unit which refracts light emitted from said pixels and emits the light in

directions different from each other; and

a means for fixing the optical unit to directly on the image surface of the display panel

such that an unfixed part between the optical unit and the display panel may be deformed to

absorb stress.

49. (currently amended): An image display device, comprising:

a display panel which has a plurality of pixel sections each of which includes at least a

pixel displaying an image for the first viewpoint and a pixel displaying an image for the second

AMENDMENT UNDER 37 C.F.R. § 1.114(c) Attorney Docket No.: Q80096

U.S. Appln. No.: 10/787,172

viewpoint, said pixel sections being provided periodically in one direction, and said display panel comprising an image surface on which the plurality of pixels are displayed;

an optical screen refracts the light emitted from said pixels and emits the light in directions different from each other, and

an adhesive layer which is provided on a part of an area enclosing an image display area of said display panel to fix the optical screen and the display panel in line,

wherein the adhesive laverlayer is provided to installaffixes the optical screen directly on the image surface of on the display panel such that a positional relationship between the optical screen and the display panel is maintained while permitting a difference in expansion or contraction between the optical screen and the display panel so as to permit displacement of the optical screen due to expansion and contraction of a material of the optical screen.

50. (currently amended): An image display device, comprising:

a display panel which has a plurality of pixel sections each of which includes at least a pixel displaying an image for the first viewpoint and a pixel displaying an image for the second viewpoint, said pixel sections being provided periodically in one direction, and said display panel comprising an image surface on which the plurality of pixels are displayed;

an optical sheet refracts the light emitted from said pixels and emits the light in directions different from each other, and

AMENDMENT UNDER 37 C.F.R. § 1.114(c) Attorney Docket No.: Q80096

U.S. Appln. No.: 10/787,172

an adhesive layer which is provided on a part of an area enclosing an image display area of said display panel to fix the optical sheet and the display panel in line,

wherein the adhesive <u>laverlayer</u> is provided to installaffixes the optical sheet <u>directly on</u> the image surface of on the display panel such that a positional relationship between the optical sheet and the display panel is maintained while permitting a difference in expansion or contraction between the optical sheet and the display panel so as to permit displacement of the optical sheet due to expansion and contraction of a material of the optical sheet.

51. (currently amended): An image display device, comprising:

a display panel which has a plurality of pixel sections each of which includes at least a pixel displaying an image for the first viewpoint and a pixel displaying an image for the second viewpoint, said pixel sections being provided periodically in one direction, and said display panel comprising an image surface on which the plurality of pixels are displayed;

an a lens film refracts the light emitted from said pixels and emits the light in directions different from each other, and

an adhesive layer which is provided on a part of an area enclosing an image display area of said display panel to fix the lens film and the display panel in line,

wherein the adhesive <u>laverlayer</u> is provided to installaffixes the lens film <u>directly on the</u> <u>image surface of on</u> the display panel such that a positional relationship between the lens film and the display panel is maintained while permitting a difference in expansion or contraction

AMENDMENT UNDER 37 C.F.R. § 1.114(c)

U.S. Appln. No.: 10/787,172

Attorney Docket No.: Q80096

between the lens film and the display panel so as to permit displacement of the lens film due to

expansion and contraction of a material of the lens film.
